Product Description

BAODU Hole Diameter Galvanized Mesh Powder Coated Perforated Metal Sheet

Product Description:

Perforated metal sheet is a kind of metal material which is made of steel sheet, aluminum sheet, stainless steel sheet and other kinds of metal sheets by punching. It has various hole diameters ranging from 0.5mm to 100mm, and surface treatments such as polishing, galvanizing, anodizing, powder coating, etc. The color of the perforated metal sheet is usually RAL, and the thickness can be customized from 0.5mm to 6mm. In addition, perforated metal sheet can also be made of high-quality stainless steel materials such as 316 and 304, which have the advantages of small holes and high strength, and are widely used in decoration. Moreover, aluminum perforated metal sheet is also favored by many customers due to its lightweight and strong corrosion resistance, and it is also an ideal material for making decorative metal products. Galvanized stainless steel aluminum perforated metal sheet is also a popular product in the market, which has the advantages of both stainless steel and aluminum, and is widely used in various industries.

Surface treatment:

1. PVC coated
2. Powder coated
3. Anodized
4. Paint
5. Fluorocarbon spraying
6. Polishing

Applications:

BAODU Perforated Metal Sheet: More Than Just Industrial Usages

BAODU perforated metal sheet is a versatile product widely used in multiple applications, including industrial usages as well as decoration.
